Phase 11 hand test

Two-step login, the security emails, downloading your business's data, the deletion request (and cancelling it), and the draft legal pages. 6 scenarios, about 20 minutes. You need your phone.

How to use this

Tick Passed when the screen shows exactly what is written. If anything is different, tick Different, write what you saw, and take a screenshot.

Use your normal development app (**npm run dev**, http://localhost:3000), logged in as the owner. Scenario 4 asks to delete the business and then cancels it at once: **do not skip the cancel**.

A. Two-step login

1. Switch on two-step login

DO

1 On your phone, install **Google Authenticator** (or Microsoft Authenticator).
2 In the app menu click **Two-step login**. Enter your password, click "Set up two-step login".
3 In the phone app: add an account → scan QR code → scan the code on the screen.
4 Type the 6-digit code the phone shows and click "Turn on two-step login".
5 Write the 10 backup codes on paper (or save them in your password manager), then click "I have saved them".

YOU SHOULD SEE

- "Two-step login is on." with 10 backup codes.
- An email "Two-step login is now on" arrives in your inbox.

☐ Passed ☐ Different (write what you saw): _____

2. Log in with the code

DO

1 Click **Log out**. Log in with your email and password.
2 Type a wrong code, e.g. 123456, and click Log in.
3 Type the code your phone shows now and click Log in.

YOU SHOULD SEE

- After the password: "Open your authenticator app and enter the 6-digit code…".
- Wrong code: "That code is not right…".
- Right code: you are in the app.

Lost phone? "Use a backup code instead" on the same screen; each backup code works once.

☐ Passed ☐ Different (write what you saw): _____

B. Your business's data

3. Download everything

DO

1 Menu → **Business settings** → scroll to "Your business's data".
2 Click "Download all data (ZIP)". Open the downloaded ZIP; open **invoices.csv** in Excel or Numbers.

YOU SHOULD SEE

- A file business-export-YYYY-MM-DD.zip with README.txt and one .csv file per kind of record.
- invoices.csv lists your test bills (amounts in paise: 79900 = ₹799.00).

Clicking again within 10 minutes says to wait: exports are limited and recorded in the audit log.

☐ Passed ☐ Different (write what you saw): _____

4. Ask to delete, then cancel at once

DO

1 Same section: in "To confirm, type the name exactly", type your business name exactly as shown. Click "Ask to delete this business".
2 Look at the top of any page.
3 Back in Business settings click **Cancel the deletion**.

YOU SHOULD SEE

- A red banner on every page: "This business will be deleted on …".
- After Cancel: the banner is gone, and the form shows "Ask to delete this business" again.

Deletion only happens 30 days later AND only when the operator runs the purge script by hand. Cancelling stops it completely.

☐ Passed ☐ Different (write what you saw): _____

C. Other checks

5. Password field and draft legal pages

DO

1 Log out. On the login page click **Show** next to the password box.
2 At the bottom of the login card click **Terms**, then **Privacy**.

YOU SHOULD SEE

- Show reveals what you typed (Hide hides it again).
- Both pages open with an orange "DRAFT for review by a lawyer" note and blanks in [brackets].

Give both pages to your lawyer (open questions 51 and 52 in docs/business-rules.md).

☐ Passed ☐ Different (write what you saw): _____

6. Switch two-step login off (optional)

DO

1 Log in (with the code). Menu → Two-step login. Enter your password, click “Turn off two-step login”.

YOU SHOULD SEE

- The page says it is off, and an email “Two-step login was turned off” arrives.

For the real shop we recommend keeping it ON for the owner and admins (open question 49).

☐ Passed ☐ Different (write what you saw): _____
